

## **Oliver Mills and Kymber Kennedy welcomed to the team**

July 11, 2023

BlueFloat Energy New Zealand and Elemental Group Limited are delighted to welcome Oliver Mills and Kymber Kennedy to our partnership as we expand our team's technical and environmental expertise.

Oliver Mills joins us as the Head of Engineering and Supply Chain, bringing with him a wealth of knowledge and experience in the design, engineering, and construction of offshore wind farms and marine infrastructure. As a Chartered Naval Architect, Oliver has worked extensively in Europe, collaborating on groundbreaking projects with wind farm developer SSE Renewables. His expertise in engineering, logistics, and procurement strategies has been instrumental in making offshore wind farms with giant 15–20MW turbines a reality. We are thrilled to have Oliver on board, and he will be relocating to Taranaki from the UK to join our team along with his wife and son.

Joining us in May, Kymber Kennedy strengthens our environmental management capabilities. With a Bachelor of Applied Science, double majoring in Energy Management and Information Science, Kymber brings a passion for sustainability and valuable experience in project management of mechanical, solar, and energy efficiency initiatives in New Zealand and North America. Recently, Kymber led an energy monitoring program in South Otago, targeting a 2GWh reduction. Additionally, Kymber has been actively involved in environmental monitoring for resource consents and community sustainability engagement, working closely with local authorities and community groups.

Kymber, based in Central Otago, will further enhance our team's commitment to environmental stewardship by commencing a Master of Sustainable Development Goals degree in July. We are thrilled to have Kymber as part of our team, contributing to our mission of driving the offshore wind industry forward.

Please join us in giving a warm welcome to Oliver and Kymber as they embark on this exciting journey with BlueFloat Energy New Zealand!
